

RITRANSPARENCY REPORT 2019

Ardea Investment Management

About this report

The PRI Reporting Framework is a key step in the journey towards building a common language and industry standard for reporting responsible investment (RI) activities. This RI Transparency Report is one of the key outputs of this Framework. Its primary objective is to enable signatory transparency on RI activities and facilitate dialogue between investors and their clients, beneficiaries and other stakeholders. A copy of this report will be publicly disclosed for all reporting signatories on the PRI website, ensuring accountability of the PRI Initiative and its signatories.

This report is an export of the individual Signatory organisation's response to the PRI during the reporting period specified above. It includes their responses to mandatory indicators, as well as responses to voluntary indicators the signatory has agreed to make public. The information is presented exactly as it was reported. Where an indicator offers a response option that is multiple-choice, all options that were available to the signatory to select are presented in this report. Presenting the information exactly as reported is a result of signatory feedback which suggested the PRI not summarise the information.

PRI disclaimer

This document presents information reported directly by signatories. This information has not been audited by the PRI Secretariat or any other party acting on their behalf. While this information is believed to be reliable, no representations or warranties are made as to the accuracy of the information presented, and no responsibility or liability can be accepted for any error or omission.

Usage restrictions

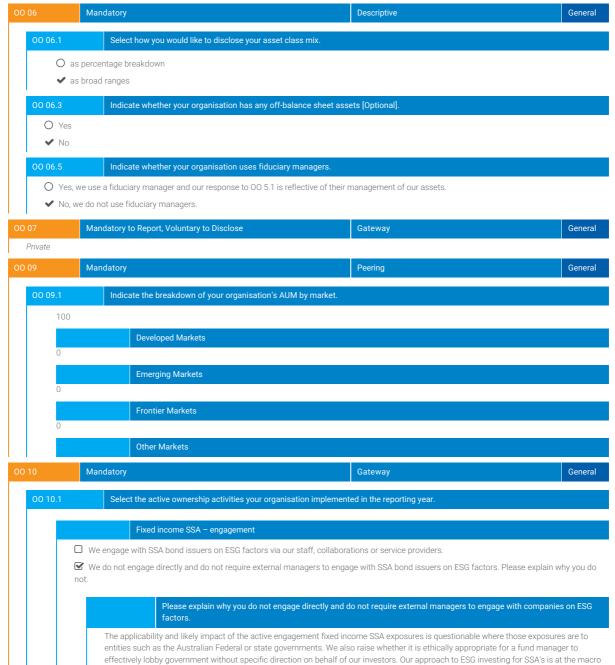

Public Transparency Reports are the intellectual property of PRI. In no case, can this report or any content of it be sold to other parties.

Third party organisations who have accessed Transparency reports outside of the Data Portal and intend to use those require the prior written consent of PRI (other than for internal use or research or for the sole benefit of the organisation whose report this refers to).

level (i.e. as ESG affects rates, inflation and volatility more generally), rather than as a "stock selection" decision Fixed income Corporate (non-financial) – engagement ☐ We engage with companies on ESG factors via our staff, collaborations or service providers. 🗹 We do not engage directly and do not require external managers to engage with companies on ESG factors. Please explain why you do not. Please explain why you do not engage directly and do not require external managers to engage with companies on ESG Our process and philosophy focuses on using primarily credit derivatives to express stock selection views and on negative stock selection (i.e. shorting names). Aside from access difficulty and ability to influence generally, active stewardship would be contrary to the intent of short positions on poor ESG names. Our belief is that by shorting issuers, this creates pricing disadvantages for poor ESG names, which is the most effective form of active management in the context of our investment approach. In saying that to the extent we have long positions in corporate names (unusual), we may seek to actively engage with them. To date however there have been no examples of this because we have not been able to identify material ESG issues that we could reasonably engage upon. General Gateway Select the internally managed asset classes in which you addressed ESG incorporation into your investment decisions and/or your active ownership practices (during the reporting year). Fixed income - SSA ✓ We address ESG incorporation. O We do not do ESG incorporation. Fixed income - corporate (non-financial) ✓ We address ESG incorporation. O We do not do ESG incorporation. Mandatory 00 12.1 Below are all applicable modules or sections you may report on. Those which are mandatory to report (asset classes representing 10% or more of your AUM) are already ticked and read-only. Those which are voluntary to report on can be opted into by ticking the box. Core modules ☑ Organisational Overview Strategy and Governance RI implementation directly or via service providers ✓ Fixed income - SSA Fixed income - Corporate (non-financial) Closing module ☑ Closing module Gateway General Provide a breakdown of your internally managed fixed income securities by active and passive strategies Туре Passive >50% O >50% **✓** >50% **✓** 10-50% O 10-50% O 10-50% SSA 100% O <10% **✓** <10% O <10% O 0% O 0% O 0% O >50% **✓** >50% >50% 0 10-50% 0 10-50% ✓ 10-50% 100% Corporate (non-financial) O <10% **✓** <10% O <10% O 0% 0 % O 0% It is difficult to classify Ardea's investing approach in this framework. We tend to use quantitative methods to identify opportunities but understand the fundamental or technical reasons why these opportunities might occur. Moreover, each strategy within fixed income can use different weightings towards different approaches Mandatory Descriptive General Indicate the approximate (+/- 5%) breakdown of your SSA investments, by developed markets and emerging markets.

SG 01.4

Describe your organisation's investment principles and overall investment strategy, interpretation of fiduciary (or equivalent) duties, and how they consider ESG factors and real economy impact.

Our overall investment proposition is to identify and quantify anomalies or incorrectly priced factors affecting fixed income markets. These anomalies may be short term or persist for years, in some cases.

Ardea's philosophy with respect to ESG, is to integrate ESG influence into its overall investment process. There are two ways in which this is done:

1. Macro Portfolio Positioning

Other RI considerations, specify (1)Other RI considerations, specify (2)

With respect to high quality government and semi government exposures (SSA), ESG factors are considered not only from a credit risk perspective where ESG factors are used to screen for appropriately high quality entities only thus limiting credit considerations, but also from impact that ESG themes might have on the macro factors (real interest rates, inflation and term structure) that these securities also give exposure to.

2. Credit Stock Selection

With respect to corporate issuers, ESG factors are also considered from a credit risk perspective, since here ESG factors are more relevant from a stock selection perspective. Our ESG Policy framework closely follows an approach recommended by the RI Academy to "Identify", "Assess" and "Integrate" ESG factors into our investment process.

We believe it is our fiduciary duty to integrate ESG into our investment decision making.

SG 01.5

Provide a brief description of the key elements, any variations or exceptions to your investment policy that covers your responsible investment approach. [Optional]

Credit Stock Selection

Our ESG policies only apply to what we refer to as active investments in local currency credit risk.

We distinguish between SSA credit risk and corporate credit risk

For SSA exposure, Ardea limits the universe of country domiciles and associated government bonds to those which we believe represent negligible credit risk. The minimisation of credit risk reflects not only the defensive nature of our portfolios generally, but our investment philosophy to focus on macro and relative value strategies with respect to liquid government bonds rather than yield enhancement or issuer selection strategies. Although we believe that the rating agencies do take ESG considerations into account with respect to rating sovereign risk and government debt, we apply additional ESG related filters which we believe enhance our ability to avoid material credit risk exposures or differences. Academic and investor research shows correlations between ESG factors and credit risks and demonstrates that corruption, governance and transparency factors and sovereign bonds performance are clearly correlated. As a result of this screen, SSA credit risk is regarded as a negligible differentiating factor and thus our strategies focus instead on macro portfolio positioning (e.g. interest rate risk) and relative value opportunities with respect to the high quality government bond universe.

For corporate exposures (and SSA exposures that do not meet the screen criteria), we integrate ESG factors into our stock selection process. We do not use ESG factors to exclusively screen the corporate universe as this would potentially exclude overall good value opportunities for our investors.

Derivative exposures which are appropriately cash collateralised are also not subject to ESG investment policies.

Short term investments (less than six months) in discount or similar securities rated A-1 or above by S&P (or equivalent) of issuers will not be subject

to our ESG integrated stock selection process for reasons of lack of materiality to performance.

Macro Portfolio Positioning

Our ESG policies with regard to macro positioning apply to all active investment decisions. Note these positions are expressed at a portfolio level e.g. the decision to be overweight inflation versus nominal instruments overall relative to the benchmark, even if they are made through one specific stock purchase.

Passive Investing

ESG policies do not apply to purely passive mandates where Ardea, in keeping with its mandate rules, is required to hold securities in direct proportion to a benchmark index.

FI 01.2 Describe your reasons for choosing a particular ESG incorporation strategy and how combinations of strategies are used.

With respect to SSA strategies our focus is to add value to portfolios via macro portfolio positioning (e.g. duration and inflation risks) and relative value, not through credit factors. Thus to ensure credit factors are there minimised via a high quality portfolio, we screen the universe for both fundamental and ESG related inputs. Beyond this point we believe our SSA strategy is integrated with ESG considerations with respect to those macro portfolio positioning only.

It is argued that incorporating ESG into investment process is a fiduciary responsibility of investment managers.[1] In some jurisdictions ESG investment goals are even embedded as director's statutory obligations. An integrated approach to ESG therefore sits comfortably with our fiduciary duties. It is more questionable whether screening and thematic based ESG processes are consistent with fiduciary duties, however since these approaches tend to exclude value from the equation of whether an investment is made or not, or in what weight (unless specifically directed by the cient).

FI 10 Mandatory Descriptive PRI 1

FI 10.1 Describe your approach to integrating ESG into traditional financial analysis

Our overall investment proposition is to identify and quantify anomalies or incorrectly priced factors affecting fixed income markets. We then position the portfolio, with careful use of risk budget, to be either underweight or overweight that factor outright and in terms of 'slope' e.g. underweight the longer maturities, overweight the shorter maturities of the real interest rate curve, to make a profit. These anomalies may be short term (e.g. days) or persist for years, in some cases.

ESG megatrends are particularly important to longer term pricing in bond markets. For instance, we have identified in Australia that water scarcity and climate change are related factors that are particularly pertinent 'ESG megatrends'. Although the current government has sought to actively distance Australia from any carbon pricing policy, the country is heavily dependent on carbon based energy sources and is unlikely, ultimately to resist this trend towards carbon rationing globally. Moreover, Australia's growing population and increasing demands from agriculture mean that water problems are likely to be exacerbated. Climate change also suggests greater variability in Australia's weather conditions with a greater chance of extreme events e.g. cyclones.

We conclude that these ESG megatrends are likely to create an impost on productivity, a higher cost structure and greater uncertainty about growth longer term. On this basis, we believe that inflation is likely to be higher, real yields lower and volatility higher than would be the case if these ESG issues were not relevant. We therefore position the portfolio for a flatter yield curve and with longer break even inflation and longer option volatility than we would otherwise be the case, with greater emphasis on longer dated instruments.

It is important to stress that other non ESG factors are also required to be considered in forming our macro portfolio positions. For example, it may be the case that central bank behaviour, when combined with the size and risk of the opportunity, and in relation to other positions taken in the portfolio, including the correlation of those positions with each other, outweighs the direction that our ESG views have on the position. Thus, the influences of ESG are only part, but a potentially important part, of our portfolio positioning decision making.

The investment process, in this regard, is almost entirely subjective and qualitative.

Describe how your ESG integration approach is adapted to each of the different types of fixed income you invest in.

SSA

Identification

Macro strategists must first identify what ESG issues are relevant to the numerous positions in the portfolio. To assist the decision makers, the ESG Issue Checklist is also required to be referred to when taking an active macro position.

Assess

This comprises:

- Assessing the probability or likelihood of the issue occurring.
- Assess the potential scale of the impact of the issue if it does occur
- · Assess the relative impact of the issue on micro and macro-economic factors and the likely response from regulators, government etc.
- Assess the likely impact on bond markets when compared to current market pricing.

Integrate

The assessment of the various ESG issues, when compared to how much that issue is currently priced in creates opportunities for positioning the portfolio profitably or to lower risk. These are however potentially competing against other factors which may offset the influence of ESG. The weighing of these factors is subjective and qualitative.

Once these various issues or themes are combined into an overall view or position, this position must be subject to our risk budgeting process, which takes into account the size of the opportunity, the risk that it creates in the portfolio and the correlation it has with other positions in the portfolio. It may be the case that our risk budget disallows the position or, even for the sake of portfolio risk efficiency, suggests positioning in an opposite way. The risk budgeting process is largely quantitative.

Corporate (non-financial)

Identification

ESG issues may be vaguely acknowledged or only front of mind if an event is fresh in experience. It is important that consistent identification of ESG issues occurs in order to maximise performance.

Ardea currently utilises a 3rd party ESG research specialist (Sustainalytics) to provide identify and assess the materiality of ESG issues and provide an overall view of the issuer based on a combination of E, S and G issues. Essentially the identification process involves an analysis of exposure by mapping the industry's key products and services (as well as its broader value chain) and then identifying the impacts of those activities on the environment, society and business. The output from this process is a set of ESG issues and a list of exposures to these issues. From these issues, key ESG issues are identified, which in turn allows Sustainalytics to determine relevant indicators to be tracked and evaluated per industry. The identification process also estimates the weights assigned to each indicator.

Where coverage is not available via the 3rd party provider (<10% of the universe), Ardea believes a uniform questionnaire required of all "in scope" investments is the most effective way of ensuring ESG issues are formally identified as part of the investment process. Whilst some of the questions are fairly obvious, it is nevertheless a way of providing discipline to the analyst's thinking. It is reviewed on an annual basis for relevance.

Assess

Sustainalytics, once they have identified the key ESG issues then undertake a materiality assessment in the form of an industry-specific matrix assessing both "sustainability" i.e. broader effect on environment and society and "business" i.e. the financial performance, impact. This matrix approach basically equally weights ESG issues between what is immediately likely to cause financial underperformance and what might ultimately also impact financial performance either through increased regulatory scrutiny and sanctions or a shift in consumer demand to more ESG friendly alternatives. This assessment of risks at the sector level is then adjusted by a beta, to reflect company specific exposure differences and controversies. Once this is done the assessment of ESG risk of the entity is calculated both relative to all entities in the universe - regardless of industry and then, also relative to its peer group or sector.

Then the vendor reduces the raw score by the company's perceived ability to manage or mitigate these raw ESG risks. These mitigating factors include E, S, and G raw data, disclosure quality and an assessment of company policies and processes and again, the observance of any ESG contraversies. The management score deducts from the raw ESG risk score to give an overall ESG risk assessment.

Finally because Ardea believes that entities with the largest ESG risks are much more likely to have a material impact on investor returns, should there by an ESG related shock event, regardless of how well perceived those entities are at managing those risks, we independently beta adjust the vendor's ESG risk score to empahasize more at risk sectors and entities. For example a well managed (from an ESG perspective) frontier-country mining entity will be penalised more than an equally well managed advertising agency in a developed nation.

Where coverage is not available via the 3rd party provider, once an ESG issue has been identified with respect to the issuer/exposure, the issue must be assessed in terms of its relevance to the company. Is it a risk, an opportunity or both? Given the nature of credit investments, most weight is given to risks arising from ESG issues. This is summarised in a type of scorecard.

This comprises

- · Assessing the probability or likelihood of the risk occurring.
- Assess the potential scale of the impact upon the issue if the risk does occur.
- · Determine what action is required to manage and mitigate the risk versus what actions are currently being undertaken.
- Assess the residual risk after mitigating factors.

The residual risk is what becomes relevant to the analyst in integrating into valuation.

Integrate

Ardea's preferred approach to credit stock selection is to identify the likely underperformers. We use a quantitative signal based on a broad range of metrics to identify those entities whose current price (spread) may not be justified based on a range of market and fundamental factors. Alongside this quantitative signal (which is expressed via a Z Score), we use the ESG Score (either Sustainalytics or our internal Scorecard approach) to form an integrated signal. This is best explained by the decision tree diagram below. The degree to which ESG influences our signal, depends on the degree to which the issuer has been identified as an underperformer from an ESG perspective and to the degree that the issuer has already been identified as being expensive by our quantitative model (based on fundamental and market data).

Once the signal is made, we use our qualitative judgement to decide whether to underweight the issuer in our universe. To the extent that the ESG score (from the 3rd party) is a contributor to the signal, we look to the qualitative analysis of the provider to assess whether we agree or not with their findings and further judge the materiality of their judgements.

For the limited sub sector of names where coverage by the 3rd party provider is not available or our quantitative signal is not available, we apply a traditional bottom-up assessment process. (see below)

FI 10.3 Additional information [OPTIONAL]

In these cases risks can be considered in the overall risk analysis in a more qualitative sense. [1] Ardea uses ESG data (e.g. from Bloomberg) where it is robust and valid to do so but tends to focus on understanding the risks and mitigating features of ESG (i.e. the Assessment Phase). In essence a judgement call is made on materiality of the assessed residual risks and this is made relative to all other risks and mitigating features that the issuer faces, including financial robustness. The net result is formulating an "issuer" rating which in turn drives pricing and allocation decisions.

There is no clear definition of materiality. Judgement of likelihood, time horizon and impact must be assessed in combination.

We do not use ESG screens and filters. "The goal of such ESG integration would be to enhance and supplement (and no replace) an asset manager's investment decision making process, rather than to avoid an evaluation of the potential merits of investing in certain companies based on their business involvement." — Quayle Watchman Consulting

[1] Certain ESG risks can be quantified and incorporated into financial modelling and sensitivities where applicable. Given Ardea's focus on investment grade entities, the importance of cash flow modelling is less relevant (it is not compulsory to financially model issuers but may be appropriate).
